Spencer Kelly

Waterloo, ON | (365) 323-0753 | Kell6733@mylaurier.ca | SpencerKelly.ca

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C, Assembly, Java, SQL, HTML, CSS, Markdown, Bash, VBA, Go
Frameworks & Libraries: React, Next.js, Node.js, Express.js, FastAPI, Tailwind, PyTorch, TensorFlow, JWT, Flask
Tools & Platforms: Git, GitHub, VS Code, Linux, Docker, Vite, QEMU, PNPM, Shell scripting, LXC, UNIX
DevOps & Databases: AWS, Azure, Vercel, Render, Nginx, CI/CD, MongoDB, PostgreSQL, Redis, SQLite

PROJECTS

Bird Watch · Reddit Sentiment Analyzer (Github)
React, TypeScript, Vite, Node.js, Express, Python, NLTK, VADER

- Used NLTK and VADER to process student forum posts on Reddit, pulling sentiment scores and discussion patterns to pinpoint which topics and coursework pain points came up most.
- Built a Node.js/Express API to fetch and process Reddit data, tuning request handling and query parameters until response time improved by 30% under realistic load.
- Built an ETL pipeline that converts raw Reddit data into clean JSON datasets and validates each output against a hand-labeled benchmark set, hitting 85% classification accuracy.
- Designed the frontend in React and TypeScript with Tailwind CSS, giving users per-course filters and time-series charts to explore sentiment trends across any subreddit.

MoxBox · Self-Hosted File Storage Platform (Github)
React, TypeScript, Vite, Node.js, Express, Proxmox

- Built a self-hosted file storage platform where users can upload, organize, and share files through a browser interface without routing any data through a third-party cloud.
- Containerized the full stack with Docker so it deploys identically on any machine, removing host-specific configuration and manual restart requirements when traffic spikes.
- Implemented JWT authentication and BCrypt hashing for security, with Multer handling file uploads and server-side validation catching errors before they reach the database.
- Deployed on a Proxmox LXC container running Alpine Linux, with resource overhead kept low enough that the host machine still handles other services without noticeable impact.

EXPERIENCE

CS Digital · Co-Founder & Technical Lead
Jul 2026 – Present · Hamilton, Ontario

- Build custom websites for local service businesses from scratch, with no page builders, no templates, and performance plus local SEO treated as requirements before anything ships.
- Run on-page, technical, and local SEO for clients, managing Google Business Profile listings and Local Service Ads to help them show up when customers search nearby.

Laurier Computing Society (LCS) · Vice President of Engineering
Sep 2025 – Present · Waterloo, Ontario

- Lead engineering on LOCAH.ai, an SU-sponsored retrieval assistant over Laurier's public site that returns cited answers to student questions, built on FastAPI, Next.js, and pgvector.
- Run weekly stand-ups, code reviews, and 1:1s with a team of 10+ engineers, keeping the codebase clean and documentation current for a project that outlasts each exec term.
- Manage the main Git repository, triaging and merging PRs, resolving merge conflicts, and enforcing review standards across 10+ contributors to keep the release pipeline moving.

Super Sucker Hydro Vac Service Inc. · Mobile Parts and Inventory Coordinator
Apr 2025 – Aug 2025, May 2026 – Aug 2026 · Hamilton, Ontario

- Managed $500K+ in parts inventory across 7 yard locations, ran regular audits to catch discrepancies, and kept records current for 10+ supervisors and field technicians.

EDUCATION

Wilfrid Laurier University · Bachelor of Science in Computer Science (BSc)
Sep 2023 – Apr 2027 · Waterloo, Ontario
